

# Master Slider Button Editor

You can use the button editor to create or edit a button's style. You can create a new style or use preset styles. You could also save the custom style as a new button for future use in other sliders and slides.

There are a lot of options for you to style your button and apply them with the option of seeing changes in real-time preview.

**i** If you remove a button from the list it will affect other sliders that use this specific button as well and their style would be removed.

The figure below shows these options on Master Slider panel

The screenshot displays the Master Slider Button Editor interface. The main editor area is titled "Button Editor" and features a central preview of a blue button labeled "Button". Below the preview are three tabs: "Normal", "Over", and "Pressed". Underneath the tabs, there are two "Button style" dropdown menus, one set to "Round" and the other to "Normal". A text area below these menus contains the instruction: "You can add custom style in below box, please make sure to enter a valid CSS. Example: *text-transform:uppercase;*". The text area contains the following CSS code:

```
1 background-color: #5a1e3;  
2 color: #fff;  
3 box-shadow:0 5px #4c87bf;
```

At the bottom of the editor are two buttons: "UPDATE BUTTON STYLE" (blue) and "SAVE AS NEW BUTTON" (grey). On the right side, there is a "Buttons" panel with a close button (X) and a list of button styles. Each style is represented by a button preview and a delete icon. The styles include various colors (blue, green, red) and shapes (rounded, square, pill).
