

Using Lightbox in Master Slider

i To use **Lightbox** in Master Slider you need to have **lightbox script** loaded on your website such as **PrettyPhoto**.

You can add a layer on your slide and under its "Layer Content" tab put `{{slide-image-url}}` to URL option.

The image below shows it in action.

The screenshot shows the 'Layer Content' tab of the Master Slider configuration interface. It features four tabs: 'Layer Content' (active), 'Transition', 'Style', and 'Misc'. Under the 'Layer Content' tab, there is a section titled 'Layer image and alt attribute' with a 'Select image' field containing a red button labeled 'KNOW MORE' and a trash icon, and an 'Alt text' field with the value 'the_alt'. Below this is a section titled 'Link layer or bind action to layer' with an 'OFF' toggle and the text 'Bind action to layer. Action runs by clicking user on the layer.' A red arrow points from the text 'Add this as URL' to the 'URL' field, which contains the placeholder `{{slide-image-url}}` and is highlighted with a red box. To the right of the URL field is a dropdown menu set to 'Open on the same page'.

You also need to fill rel attribute option based on the Lightbox you are using, which you can find, from their **documentation**. Below is an example of using **prettyPhoto** as **Lightbox**.

After adding `{{slide-image-url}}` to URL option, navigate to its "Misc" tab and add **prettyPhoto** to rel attribute option.

The screenshot shows the 'Misc' tab of the Master Slider configuration interface. It features four tabs: 'Layer Content', 'Transition', 'Style', and 'Misc' (active). There are four input fields: 'CSS class name' with the value 'class_name', 'CSS id' with the value 'css_id', 'Title attribute' with the value 'title attr', and 'Rel attribute' with the value 'prettyPhoto'. The 'Rel attribute' field is highlighted with a red box.
