

# Language and Localization

There are two options on translating Master Slider.

## Using our Online Translation Service (Recommended)

You can start translating Master Slider in a minute by using our [online translation service](#)

## Using Poedit App

- Download Poedit

**i** There are several apps available to help you with translating .PO files. PoEdit is a popular one, and it's available on every major platform. You can download it from [here](#).

- Start translating

**i** Open the default **masterslider.po** file from your **/wp-content/plugins/masterslider/languages/** folder. When you save your work **PoEdit** will generate you a .MO file which will be needed to apply your work.

- Name your files properly WordPress recognizes your localization by a special formatting of file names. You will need to include the right language and country codes so it can identify what language is your work made for.

**i** For example, a French localization would have the file names: **masterslider-fr\_FR.po** and **masterslider-fr\_FR.mo**. You must follow this syntax, including the **dash**, **underscore**, and **lower or uppercase letters**.

- Apply your localization

**i** Copy your newly created **.PO** and **.MO** files into the **/wp-content/plugins/masterslider/languages/** folder. WordPress should use them immediately if you named your files properly.
