

Slider UI Controls

Master Slider has variety of UI controls that add more control over slider or show additional info like slide info or thumbnails beside the slider.

To add new control to the slider, you need to define it by using `control` method, below shows an example of adding `arrows` control to the slider.

```
var slider = new MasterSlider();
slider.setup('masterslider' , {width:800, height:350});
slider.control('arrows'); // here we've added arrow control to the slider.
```
